

Do you need to host production data?

Yes

I need hosting for production data.

No

Not yet. I want to run test apps with non-production data.

Do your apps need to handle sensitive data and require high availability?

Low

Applications do not collect or store sensitive data. Not required to be highly available.

Moderate

Some sensitive data is used or collected. Apps require high availability.

How many systems?

Typically, if you need Dev, Staging, and QA environments along with your Production environment, those are all included in one system.
